ROWLAND WATER DISTRICT EASES DROUGHT RESTRICTIONS

Rowland Water District (RWD) has eased its drought restrictions, thanks to conservation efforts, improved supplies and new state regulations that allow agencies to set their own savings targets. On July 19, 2016, RWD's Board of Directors approved moving to Level 1 of the District's Water Conservation and Water Shortage Contingency Plan. This stage went into effect immediately and requires mandatory savings of at least 10 percent.

"While we are able to relax the restrictions, people still need to be careful about how they use water. The ongoing drought has shown us that water efficiency has to be a way of life now," RWD General Manager Tom Coleman said.

Under Level 1, RWD customers can irrigate with potable water on Mondays, Wednesdays and Fridays, and must repair leaks, breaks and plumbing malfunctions within 72 hours. Those who exceed the 10 percent reduction will be billed an additional \$2.52 per unit.

Previously, state regulators responding to a drought emergency ordered RWD to cut water use 20 percent from 2013 levels. Recent revisions to the rules, however, allow water suppliers to set their own conservation targets based on their individual supply situations.

"RWD has worked diligently to develop more drought-proof local supplies," Board President Szu Pei Lu-Yang said. "The District is expanding its recycled water system, cleaning up groundwater and taking other steps to decrease reliance on imports from the State Water Project."

In May, the most recent period for which figures are available, RWD customers cut water use by 20 percent compared with the same month in 2013. The District's cumulative savings between June 2015 and May 2016 was 12.5 percent.

Gov. Jerry Brown has permanently banned outdoor water waste such as irrigation runoff, hosing off sidewalks and driveways, and watering within 48 hours of measurable rainfall.

To report overwatering or runoff, or for more information about water conservation and a complete list of regulations, call 562-697-1726, or visit www.rowlandwater.com.

Rowland Water District Details Long-Term Water Supply

The 25-year management plan is adopted by Board of Directors

Rowland Water District (RWD) Board of Directors adopted the agency's 2015 Urban Water Management Plan at the June 14 meeting. The document supports long-term resource planning and spells out how the District will meet water demands over the next 25 years.

Water suppliers who deliver more than 3,000 acre-feet of water or serve more than 3,000 connections per year are required under state law to prepare a supply management plan every 5 years. Districts are also required to include their progress toward the mandated 20 percent water conservation by 2020.

“Planning for our area’s future water supply needs is a primary commitment for Rowland Water,” says RWD’s General Manager, Tom Coleman. “It is critical that we continue our efforts to pursue alternative supplies and ultimately reduce our reliance on imported water, particularly in this time of historic drought.”

The District is planning to expand its recycled water system and work with neighboring agencies to clean up groundwater, establish water transfer agreements, and lease additional pumping rights. The District also plans to continue conservation programs to reduce water use to meet the 20 percent conservation requirement.

“The board’s adoption of this plan is a chance for the District to formalize its strategic vision into effective action,” adds RWD Board President, Szu Pei Lu-Yang. “Our customers can rest assured that we are ready for any eventuality and working tirelessly to secure their water supply needs day in and day out.”

RWD submitted final documents to the Department of Water Resources on July 1. Copies are available at the District Headquarters or online at www.rowlandwater.com

Southern California Gas Company

16.07.21:

Let’s Keep the Energy Flowing This Summer. Together we can reduce the risk of power outage.

Natural gas fuels about 60% of the electricity generated in California.

The chance of power outages in Southern California is higher than normal this year. That's why we're reaching out to responsible customers like you, so that we can band together to conserve electricity and

natural gas.

Please help Southern California reduce energy use by:

- Turning off all unnecessary lights
- Setting your air conditioner to 78° F or higher
- Delaying the use of any major appliances until after 9 p.m.

Filings Validate Reasonableness of San Onofre Settlement which Ensures SCE Customers Do Not Pay for Mitsubishi's Faulty Steam Generators

ROSEMEAD, Calif., July 21, 2016 — Filings submitted on July 7 to the California Public Utilities Commission do not call into question the reasonableness of the settlement agreement regarding the San Onofre nuclear plant closure, according to the reply submitted today by Southern California Edison. The filings were made in response to a May 9 commission ruling to reopen the record of the San Onofre settlement, reached in 2014 by SCE, San Diego Gas and Electric Co. and consumer, environmental and labor advocates.

The commission asked the parties to address whether the substantive terms of the settlement remain reasonable, lawful and in the public interest. According to SCE's reply, none of the parties' filings shows that the substantive terms of the settlement are unreasonable.

"We continue to believe the transparency of this process will allow interested parties to review the settlement and confirm for themselves that it should stand," said Ron Nichols, president of SCE.

"Our shareholders, and not customers, are paying for the faulty steam generators from the day they were no longer providing power," Nichols said. He noted that the settlement reduced the amount residential customers pay in their monthly bills for past investments to build and maintain San Onofre. "The portion of residential customers' bills attributable to San Onofre — currently about \$2 per month — doesn't cover the cost of the faulty steam generators, but instead pays for other reasonable investments in a plant that provided safe, reliable, low-cost power for nearly 30 years," Nichols added.

The settlement also:

- Recognizes that SCE is aggressively pursuing an arbitration to maximize recovery from Mitsubishi, the designer of the faulty steam generators, and requires that 50 percent of any net proceeds from legal action be returned to customers.
- Has credited to customers \$500 million, including [**\\$293 million from a recovery that SCE obtained from its insurance carrier.**](#)

SCE retired San Onofre in June 2013 and is focused on safely decommissioning the nuclear plant, guided by core principles of safety, stewardship and engagement. SCE has established a Community Engagement Panel to support those principles. For more information, visit songscommunity.com.
